

USER STORY :As a user, I want to securely save my bank account details in my profile so that the system has a record of where to send my payouts.

Scenario 1 - Viewing Banking Details with no details saved

- **GIVEN** I have never saved banking details before.
- **WHEN** I navigate to the "My Account Details" section and select "View Details".
- **THEN** the system should recognize the empty state and direct me to the "Banking Details Form" so that I can provide my information.

Scenario 2 - Navigating to Add Banking Details

- **GIVEN** I am a user.
- **WHEN** I navigate to the "My Account Details" section and select "Add/Edit Details".
- **THEN** the system should display the "Banking Details Form" with fields for Bank Name, Account Holder, and Account Number.

Scenario 3 - Validation of Incomplete Information

- **GIVEN** I am on the banking details form.
- **WHEN** I leave any required field empty and attempt to save.
- **THEN** the system should prevent the submission and notify me of the missing information.

Scenario 4 - Viewing Saved Banking Details

- **GIVEN** I have previously saved my banking details in the database.
- **WHEN** I navigate to the "My Account Details" section.
- **THEN** I should see my confirmed Bank Name and a masked version of my Account Number for security.
